

LogicNets and Howard University to Collaborate

(Washington, D.C. – May 6, 2009) Jelle Ferwerda, President and CEO of LogicNets Incorporated, and John Trimble, Associate Professor & Director of Graduate Studies at the Howard University College of Engineering, Architecture, and Computer Science, are pleased to announce a collaboration between LogicNets and Howard University in the field of expert systems.

This alliance melds LogicNets' powerful expert system and extensive professional experience and Howard University's experience in intelligent systems and software engineering. The collaboration leverages both party's proficiency in Expert Systems, Knowledge Management, and Artificial Intelligence. In addition, Howard is integrating LogicNets into their graduate-level Expert Systems course starting this spring semester.

About LogicNets

A market leader in Expertise Automation, LogicNets Incorporated offers business professionals an expert system for creating their own applications. This expert system is ideally suited to sales, customer support, and professional services, and LogicNets has customers in the fields of Manufacturing, Media, Insurance and Healthcare, and Professional Services. Current customers include many Fortune 500 companies as well as midsize and small companies.

Additionally, as part of a nonreimbursable Space Act Agreement, NASA and LogicNets are working together to extend the LogicNets system to include intelligence modeling for the use of controlling autonomous robotic vehicles.
