

LogicNets v7.4 Highlights

www.logicnets.com

1. Designer and Content Modeling

- New multiple designer tabs (allows concurrent focus on unlimited project components)
- New project validation tool
- Legacy project converter
- Enhanced test process data viewer
- New data types and parts
- Improved access to session data packages
- Post-Install Jobs

2. Installation & Configuration

- Launch package by category
- Group-level access controls
- Distributed user management
- Enhanced command line interface
- ADFS support

3. Framework-Specific

- Assessment Framework: Collapsible Sections
- Starter App Framework: Custom layout
- Web Services Framework: Token-based authentication

Version 7.4 is incorporated into all new LogicNets designer and run-time deployments and is already supporting our turn-key healthcare solution services such as The AUC Solution for PAMA compliance and the Pre-Op Diabetes Management Solution based on UCSF content. Our Project Managers are already in touch with customers designing applications in LogicNets to schedule the appropriate time to upgrade both production and pre-production environments. Please use your Support Portal account to check with us if you need more information.
