Pre-Op Diabetes Management Solution

Safer, Personalized Preoperative Diabetes Care

Co-Developed with UCSF Diabetes Center

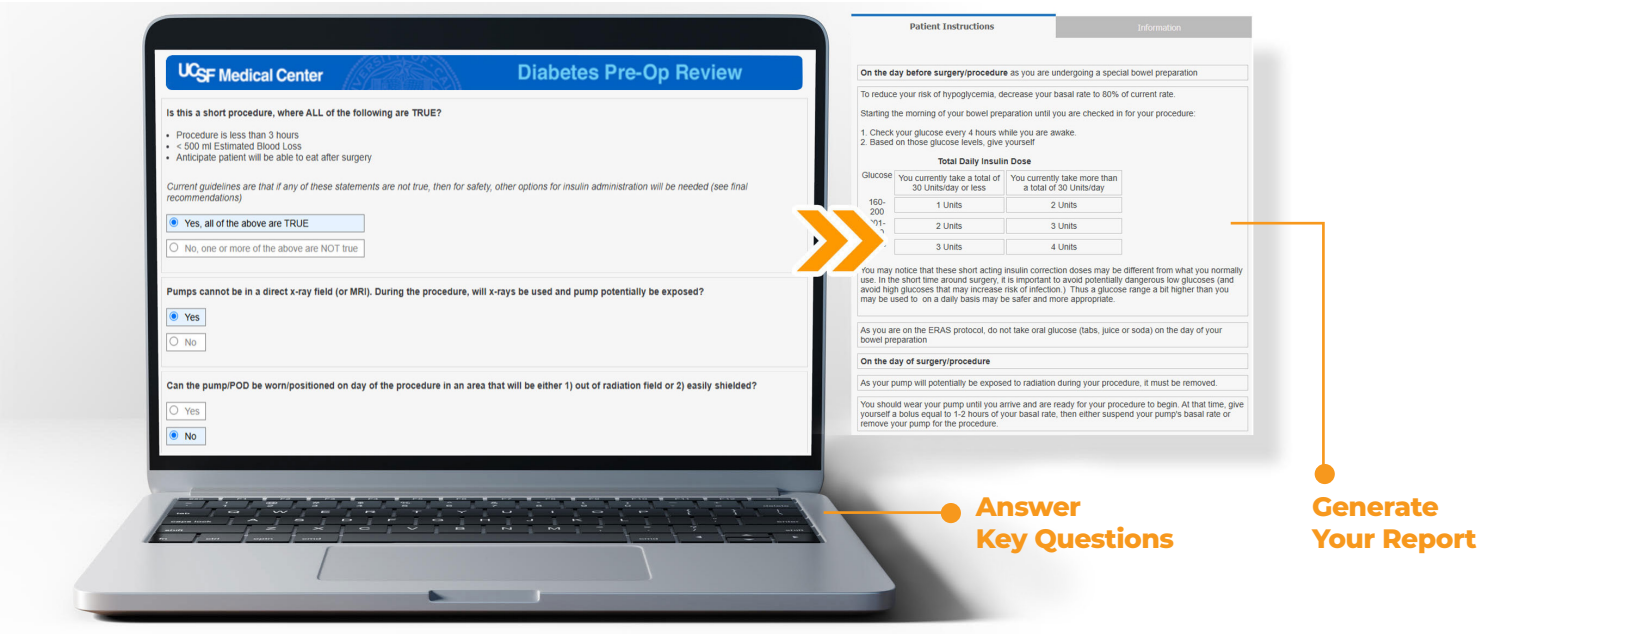
Manage Diabetes Preoperatively without Complications and Cancellations

As a healthcare provider, ensuring that your patients with diabetes receive safe, well-coordinated care before and during surgery is critical to reducing risks and improving outcomes. It's also vital to eliminate unnecessary cancelations due to improper preparation. The **LogicNets Pre-Op Diabetes Management Solution**, developed in collaboration with the **UCSF Diabetes Center**, offers your organization an easy-to-use tool for managing diabetes medications in the preoperative setting. This web-based application which can be integrated into the workflow helps you dynamically access high quality guidance based on clinical consensus, evidence (when available), and current best practices, all overseen and evaluated by the UCSF diabetes research team. The system leads your staff interactively through a responsive, smart questionnaire and generates clear-cut, brief recommendations that can be printed or emailed to patients and are easily incorporated into the electronic patient record.

Why Choose the LogicNets Solution for Your Practice?

Pre-op diabetes management presents unique challenges, especially when balancing medication adjustments with procedure-specific care and the need to avoid surgery cancellations. LogicNets simplifies this process by offering a **complete and up-to-date** solution capable of accurately handling any common Diabetes treatment regimen in consideration of the very latest advancements in the field. Incorporating hundreds of up-to-date decision pathways, the solution provides your staff and patients with clear, comprehensive pre-op diabetes care plans tailored to each patient's unique medical profile.

By evaluating the patient's specific data—such as their current medications, health status, and the type of procedure they're undergoing—your team can generate a **personalized treatment plan** that addresses individual patient needs and the specifics of the recommended procedure.



Here's how the LogicNets Pre-Op Diabetes Management Solution supports your operations:

- Individualized Preoperative Care Plans
- Clear and Efficient Communication
- Leading Industry Guidance
- Minimize Cancellation Rates and Protect Your Revenue
- Accesible On-Line and Through the Workflow
